EXP 1	Creation of the Library Management System Application

Aim:

To create a new low-code application named "Library Management System" in Zoho Creator that will hold the books catalogue, library members and book issue/return transactions.

Theory:

Zoho Creator is a low-code platform in which an application is a container for forms (data tables), reports (views of the data), pages (dashboards), workflows (Deluge business logic) and functions.

- **Application:** Created from scratch from the Creator home page. The application name decides the link name used in its URL.
- **Builder and Live mode:** The application builder (creator.zoho.in/appbuilder) is used to design components, and "Access this application" opens the live app used by the librarian.
- **Application URL:** https://creatorapp.zoho.in/mythrayee.v.2024.aiml_raj/library-management-system/

Procedure:

1. Sign in to Zoho Creator with the college account and open the Applications page.
2. Click Create Application and choose Create from scratch.
3. Enter the application name "Library Management System" and click Create Application.
4. The blank application opens in the builder with the option to create the first form.
5. Open Settings to view the application URL and the date format (dd-MMM-yyyy, IST).
6. Return to the home page and confirm that the application is listed.

Output:

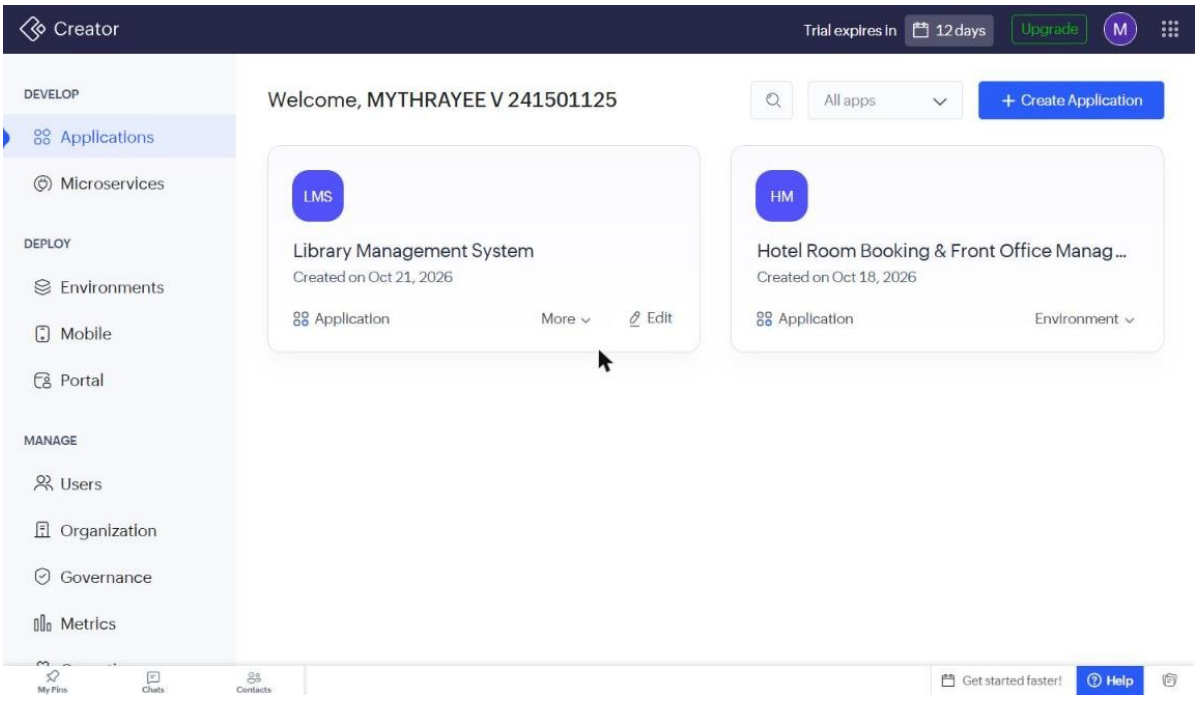

Fig. 1.1: Applications page showing the Library Management System application

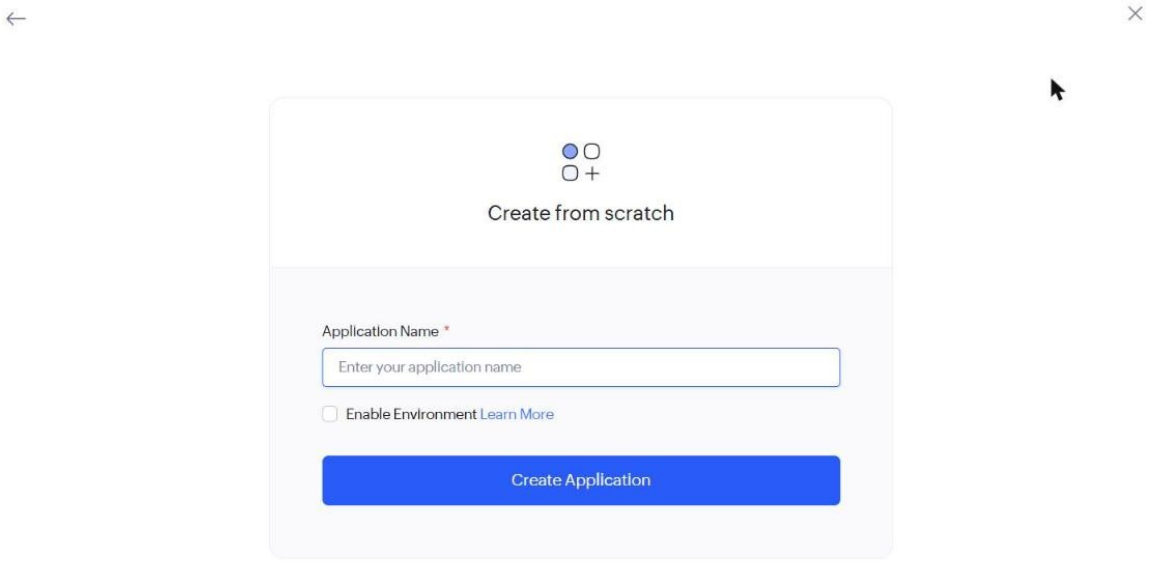

Fig. 1.2: Create from scratch screen

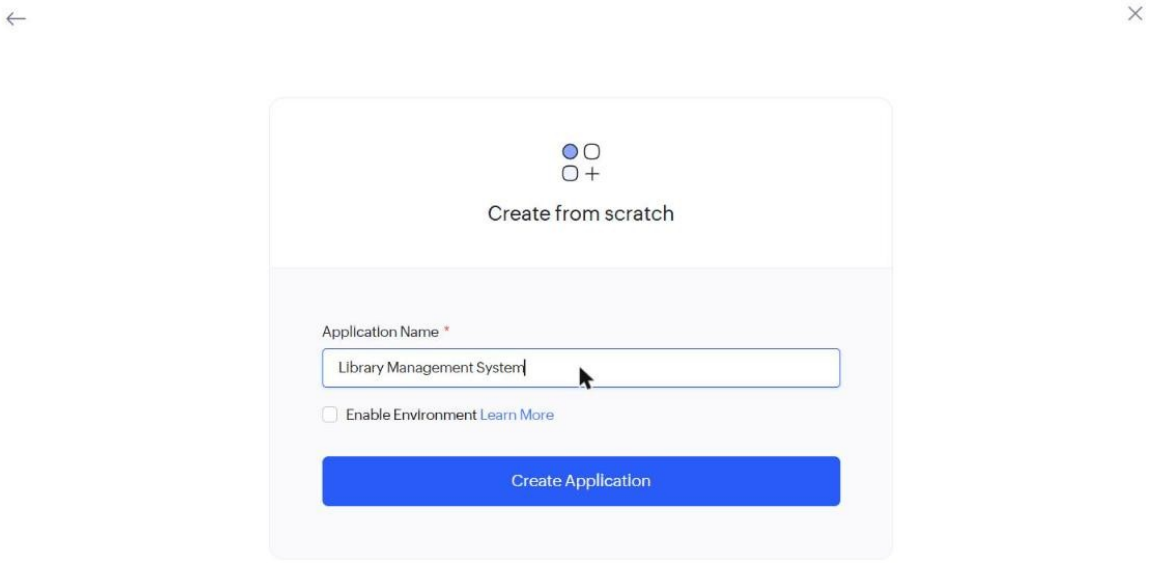

Fig. 1.3: Application name entered

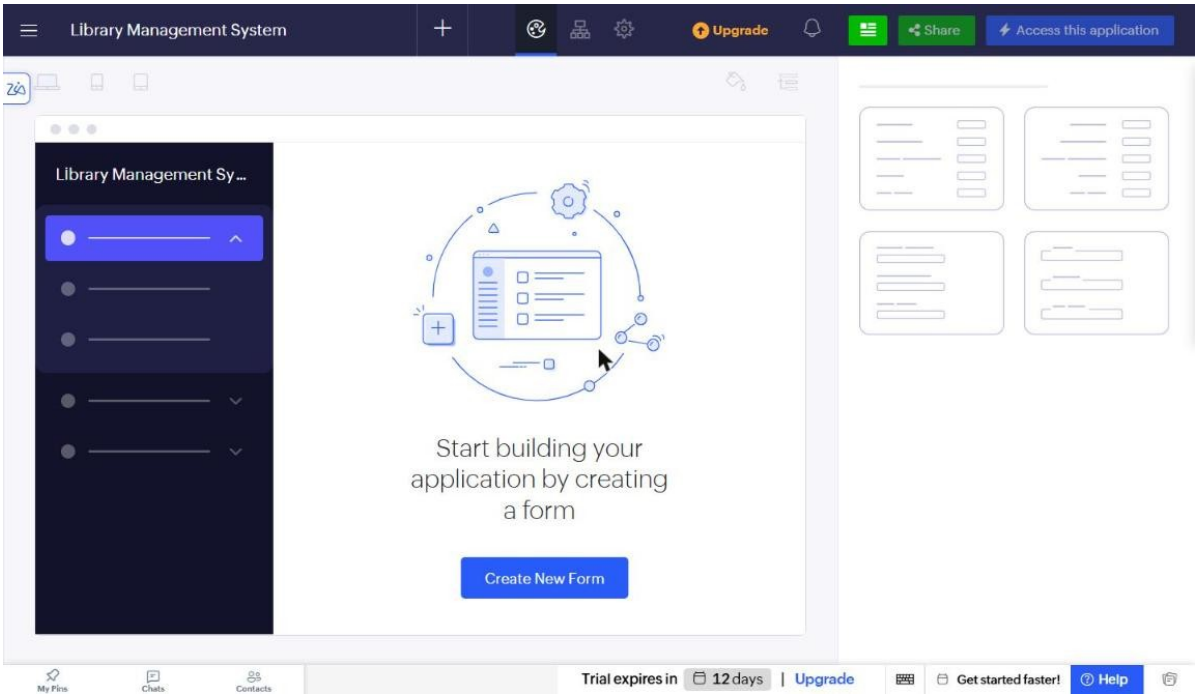

Fig. 1.4: Blank application created in the builder

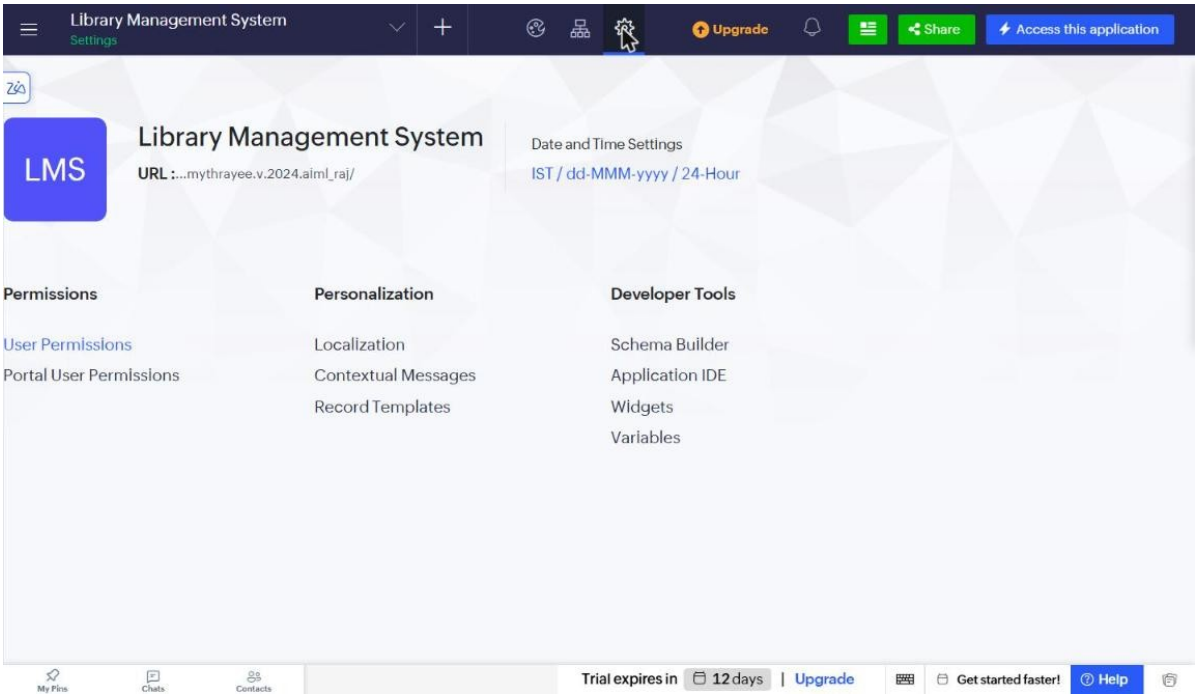

Fig. 1.5: Application settings showing URL and date format

Observation:

Item	Value
Application name	Library Management System
Link name	library-management-system
Owner	mythrayee.v.2024.aiml_raj
Date format / time zone	dd-MMM-yyyy / IST

Live URL	https://creatorapp.zoho.in/mythrayee.v.2024.aiml_raj/library-management-system/

Result:

The Library Management System application was created successfully in Zoho Creator and is ready for adding forms, reports, workflows and the dashboard.
