EXP 6	Book Catalogue Report

Aim:

To create a Book Catalogue report that lists all books with their stock position and supports searching by title, author and category.

Theory:

A list report shows the records of a form as a table. Columns, captions and the report name are configured in the Application IDE.

- **Search:** The search icon of the live report searches Book Title, Author and Category.
- **Stock columns:** Total Copies and Available Copies show how many copies the library owns and how many are on the shelf.

Procedure:

1. Open Settings > Application IDE > Books > All Books.
2. Rename the report to Book Catalogue and list the columns Book ID, ISBN, Book Title, Author, Category, Publisher, Total Copies, Available Copies and Shelf Location.
3. Save the script and open Book Catalogue from the live application menu.
4. Scroll to the stock columns and use the search box to find a title.

Program (Book Catalogue report - columns):

```
list All_Books
{
    displayName = "Book Catalogue"
    show all rows from Books
    (
        Book_ID as "Book ID"
        ISBN
        Book_Title as "Book Title"
        Author
        Category
        Publisher
        Total_Copies as "Total Copies"
        Available_Copies as "Available Copies"
        Single_Line as "Shelf Location"
    )
}
```

Output:

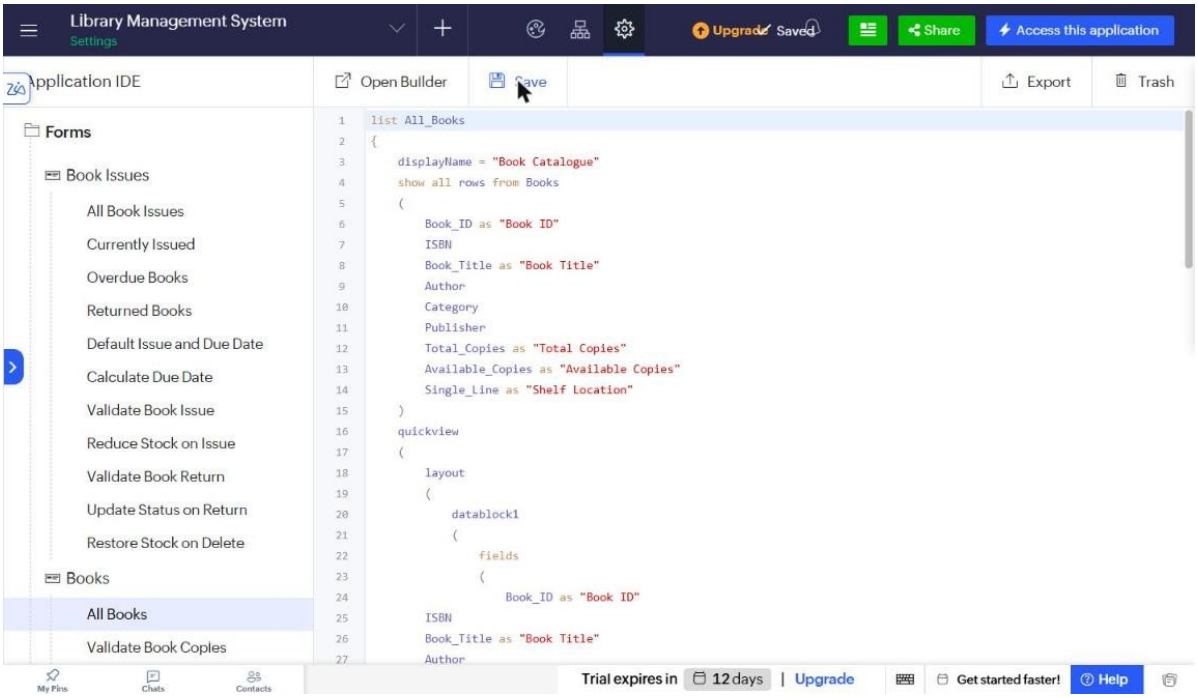

Fig. 6.1: Book Catalogue report definition

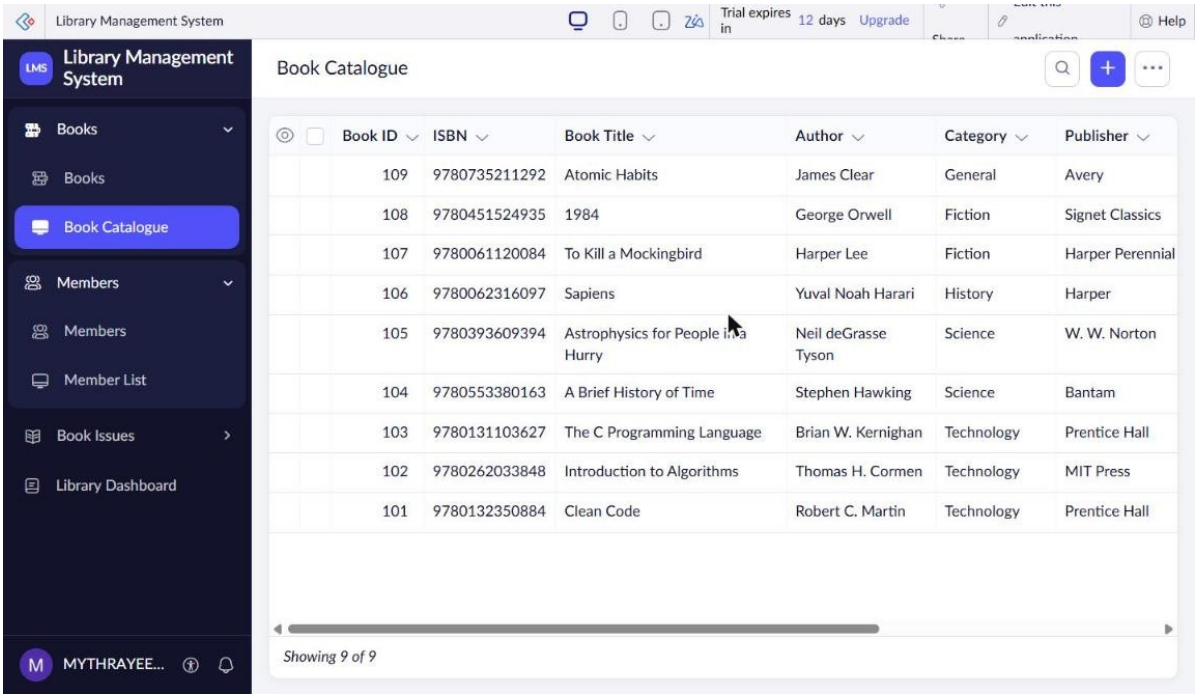

Fig. 6.2: Book Catalogue in the live application

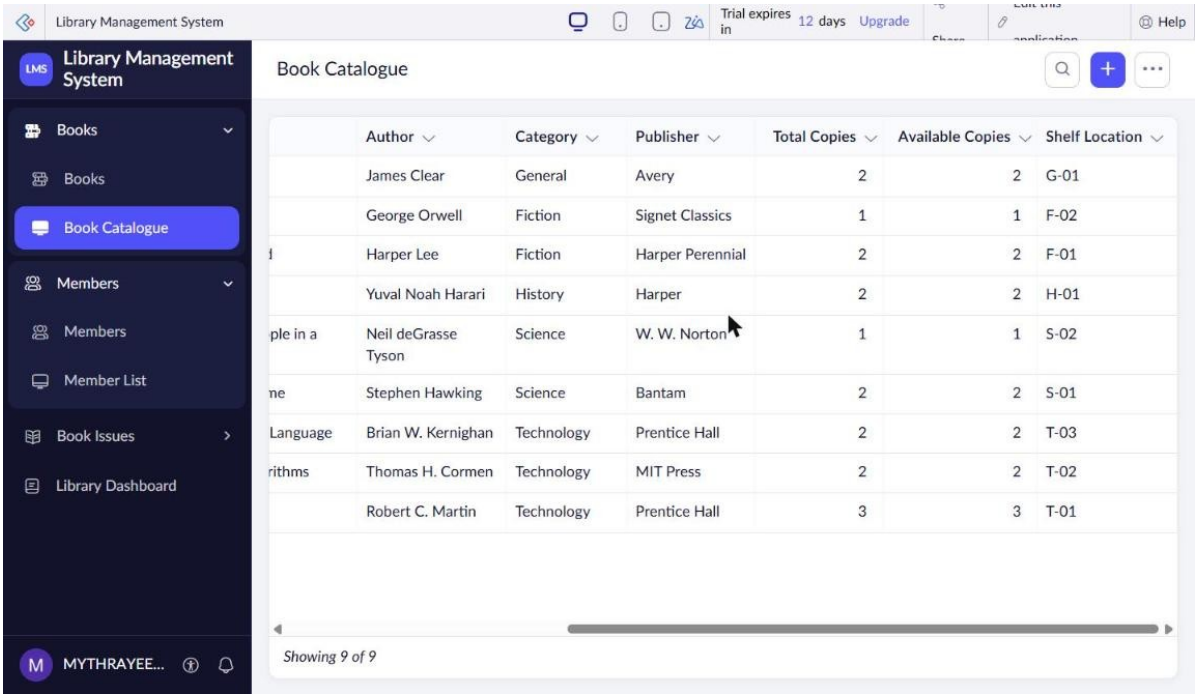

Fig. 6.3: Total and Available Copies columns

Result:

The Book Catalogue report was created and displays all nine titles with their total and available copies.
